*NAS RK is pleased to announce that News of NAS RK. Series of geology and technical sciences scientific journal has been accepted for indexing in the Emerging Sources Citation Index, a new edition of Web of Science. Content in this index is under consideration by Clarivate Analytics to be accepted in the Science Citation Index Expanded, the Social Sciences Citation Index, and the Arts & Humanities Citation Index. The quality and depth of content Web of Science offers to researchers, authors, publishers, and institutions sets it apart from other research databases. The inclusion of News of NAS RK. Series of geology and technical sciences in the Emerging Sources Citation Index demonstrates our dedication to providing the most relevant and influential content of geology and engineering sciences to our community.*

Қазақстан Республикасы Ұлттық ғылым академиясы "ҚР ҰҒА Хабарлары. Геология және техникалық ғылымдар сериясы" ғылыми журналының Web of Science-тің жаңаланған нұсқасы Emerging Sources Citation Index-те индекстелуге қабылданғанын хабарлайды. Бұл индекстелу барысында Clarivate Analytics компаниясы журналды одан әрі the Science Citation Index Expanded, the Social Sciences Citation Index және the Arts & Humanities Citation Index-ке қабылдау мәселесін қарастыруды. Web of Science зерттеушілер, авторлар, баспашилар мен мекемелерге контент тереңдігі мен сапасын ұсынады. ҚР ҰҒА Хабарлары. Геология және техникалық ғылымдар сериясы Emerging Sources Citation Index-ке енүі біздің қоғамдастық үшін ең өзекті және беделді геология және техникалық ғылымдар бойынша контентке адалдығымызды білдіреді.

НАН РК сообщает, что научный журнал «Известия НАН РК. Серия геологии и технических наук» был принят для индексирования в Emerging Sources Citation Index, обновленной версии Web of Science. Содержание в этом индексировании находится в стадии рассмотрения компанией Clarivate Analytics для дальнейшего принятия журнала в the Science Citation Index Expanded, the Social Sciences Citation Index и the Arts & Humanities Citation Index. Web of Science предлагает качество и глубину контента для исследователей, авторов, издателей и учреждений. Включение Известия НАН РК. Серия геологии и технических наук в Emerging Sources Citation Index демонстрирует нашу приверженность к наиболее актуальному и влиятельному контенту по геологии и техническим наукам для нашего сообщества.

## **CALCULATION AND VISUALIZATION OF THE ELECTRIC FIELD OF A SPACE-CHARGED SPHERE**

**Abstract.** The article presents the calculations and visualization of the electric field of a space-charged sphere (i.e., a sphere charged throughout its volume) done using the MATLAB program. There is the calculation of the electric fields and potentials inside and outside of a space-charged sphere as a function of the distance from the center of the sphere. The electric field inside the sphere is proportional to the distance of the field point from the center of the sphere and the potential inside the sphere is inversely proportional to the squared distance from the center of the sphere. The electric field outside the sphere decreases inversely proportionally to the square of the distance from the center of the sphere, and the potential decreases inversely proportionally to the distance from the center of the sphere. There is the calculation of the electric field and potential at the surface and at the center of the sphere. The equipotential lines of the electric field outside and inside the sphere are represented in three-dimensional space and in projection on the X-Y plane.

**Key words:** visualization, the space-charged sphere, potential, electric field, equipotential lines.

**Introduction.** Nowadays all educational institutions of Kazakhstan are provided with computer hardware and software, interactive boards and internet. Almost all teachers have completed language and computer courses for professional development. Hence the educational institutions have all conditions for using computer training programs and models for performing computer laboratory works. During several years we have been conducting the work on organization computer laboratory works on physics with use of resources of the Fizikon Company [1, 2] which are developed at Al-Farabi Kazakh National University by V.V.Kashkarov and his group. Some of worksheet templates for computer laboratory works are introduced in educational process of our university and schools of the Southern Kazakhstan [3-28]. Students of the physics specialties 5B060400 and 5B011000 successfully master the discipline “Computer modeling of physical phenomena” which is the logical continuation of the disciplines “Information technologies in teaching physics” and “Use of electronic textbooks in teaching physics”. The aim of this discipline is to study and learn the MATLAB program language [29] system, acquaintance with its huge opportunities for modeling and visualization of physical processes. This article is devoted to organization of performance of the laboratory work "Calculation and visualization of the electric field of a space-charged sphere" in the MATLAB language.

Here is the brief theory of the electric field of a space- charged sphere. If  $\rho = \frac{q}{V} = \frac{q}{\frac{4}{3}\pi R^3}$  is the

volume charge density of the sphere, then the electric field inside the space-charged sphere according the Gauss's theorem will be:

$$4\pi(r)^2 E = \frac{4\pi(r)^3 \rho}{3\epsilon_0} \Rightarrow E(r \leq R) = \frac{1}{4\pi\epsilon_0} \frac{qr}{R^3} \quad \text{or} \quad E(r \leq R) = \frac{\rho r}{3\epsilon_0} \quad (1)$$

and the electric field outside the space-charged sphere will be

$$E(r > R) = \frac{q}{4\pi\epsilon_0 r^2} \quad \text{or} \quad E(r > R) = \frac{\rho R^3}{3\epsilon_0 r^2} \quad (2)$$

The potential difference inside the space-charged sphere is given by the expression:

$$-\int_{\varphi_1}^{\varphi_2} d\varphi = \int_r^R Edr \Rightarrow \varphi_1 - \varphi_2 = \frac{q}{8\pi\epsilon_0 R^3} (R^2 - r^2) \quad \text{or} \quad \varphi_1 - \varphi_2 = \frac{\rho R^2}{6\epsilon_0} - \frac{\rho r^2}{6\epsilon_0} \quad (r < R) \quad (3)$$

and the potential difference outside the space-charged sphere is

$$\varphi(r > R) = \frac{q}{4\pi\epsilon_0 r} \quad \text{or} \quad \varphi(r > R) = \frac{\rho R^3}{3\epsilon_0 r} \quad (4)$$

In the given formulae  $\rho$  is the volume charge density of the sphere,  $q$  is the charge of the sphere,  $R$  is the radius of the sphere,  $r$  is the distance from the center of the sphere,  $\epsilon_0$  is the electric constant.

The formulae (2) and (4) show that outside the space-charged sphere the electric field and the potential are the same as if all of the charge were concentrated at the center of the sphere.

**Methods.** The program for calculation and visualization of the electric field of a space-charged sphere is written in the MATLAB language. This program calculates the electric fields and potentials of the field inside and outside of a space-charged sphere and visualizes its equipotential lines.

```
% The electric field inside a space-charged sphere
>> q=9e-9; % input the charge of the sphere
>> e0=8.85e-12; % input the electric constant
>> R=0.10; % input the radius of the sphere
>> r=0:0.01*R:0.1*R; % input the radius vector
>> ro=q./(4*pi*R.^3./3); % calculation of the volume charge density of the sphere
>> E1=q.*r./(4*pi*e0*R.^3); % calculation of the electric field inside the sphere
>> E11=q./(4*pi*e0*R.^2) % calculation of the electric field at the sphere surface
E11 = 8.0926e+003% result
>> f1=ro*R.^2./(2*e0)-ro.*r.^2./(6*e0); % calculation of the field potential inside the sphere
>> plot(r,E1,'k-') % visualization of the electric field inside the sphere
>> plot(r,f1,'k-') % visualization of the field potential inside the sphere
>> grid on % drawing the coordinate grid
>> xlabel('r,m') % input the name of the axis
>> ylabel('E1,V/m') % input the name of the axis
>> title('E1=F(r)') % input the name of the graph
The result is presented in the figure 1.
>> f1=ro*R.^2./(2*e0)-ro.*r.^2./(6*e0); % calculation of the field potential inside the sphere
>> plot(r,f1,'k-') % visualization of the field potential inside the sphere
>> grid on % drawing the coordinate grid
>> xlabel('r,m') % input the name of the axis
>> ylabel('f1,V') % input the name of the axis
>> title('f1=F(r)') % input the name of the graph
The result is presented in the figure 2.
```

Figure 1 shows that the electric field inside the sphere increases linearly from zero at the center up to its maximum at the surface of the sphere. But the field potential inside the space-charged sphere falls from 1214 V at its center to 809 at its surface (figure 2).

```
>> f10=ro*R.^2./(2*e0) % calculation of the field potential at the center of the sphere
f10 = 1.2139e+003% result
>> r=R:0.1*R:5*R; % input the vector of the distance
>> f12=ro*R.^3./(3*e0.*r); % calculation of the field potential outside the sphere
```

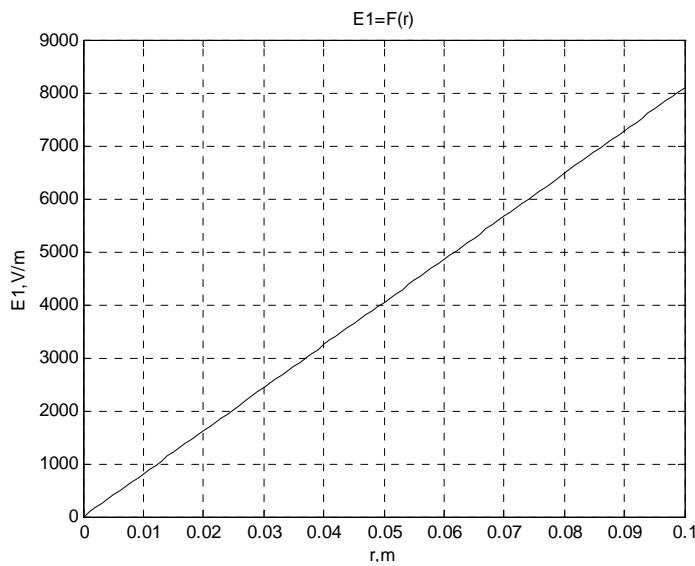

Figure 1 – The electric field inside the sphere as a function of the distance from the center of the sphere

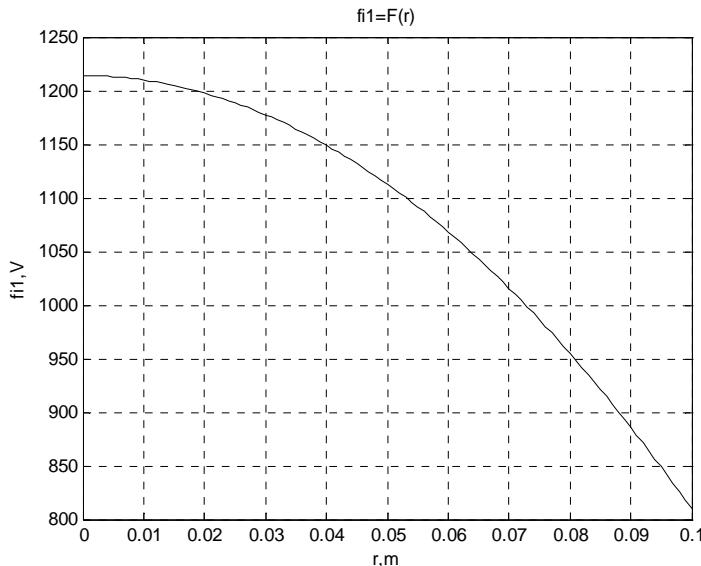

Figure 2 – The field potential inside the sphere as a function of the distance from the center of the sphere

```
>> fi22= ro*R.^2./(3*e0) % calculation of the field potential at the surface of the sphere
    fi22 = 809.2624% result
>> plot(r,fi2,'k-') % visualization of the field potential outside the sphere
>> grid on % drawing the coordinate grid
>> xlabel('r,m') % input the name of the axis
>> ylabel('fi2,V') % input the name of the axis
>> title('fi2=F(r)') % input the name of the graph
Results. The result is presented in the figure 3.
>> E2=q./(4*pi*e0*r.^2); % calculation of the electric field outside the space-charged sphere
>> plot(r,E2,'k-') % visualization of the electric field outside the space-charged sphere
>> grid on% drawing the coordinate grid
>> xlabel('r,m') % input the name of the axis
>> ylabel('E2,V/m') % input the name of the axis
>> title('E2=F(r)') % input the name of the graph
The result is presented in the figure 4.
```

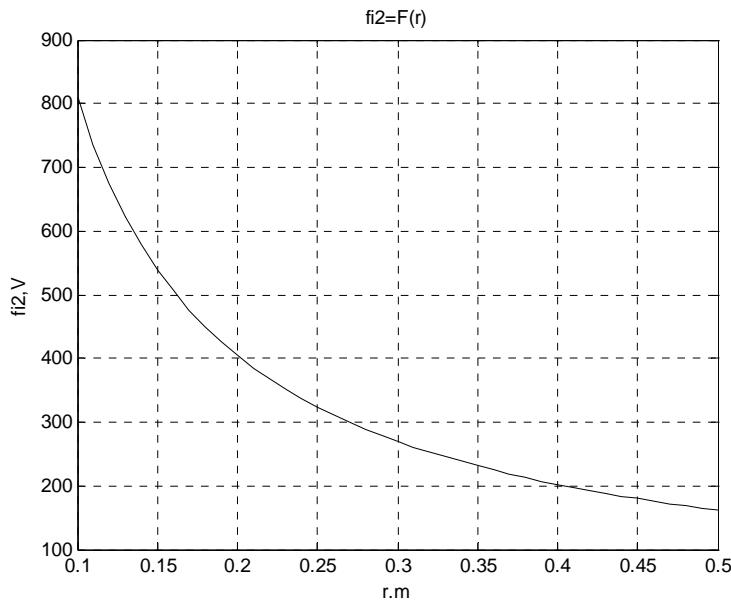

Figure 3 – The field potential outside the sphere as a function of the distance from the center of the sphere

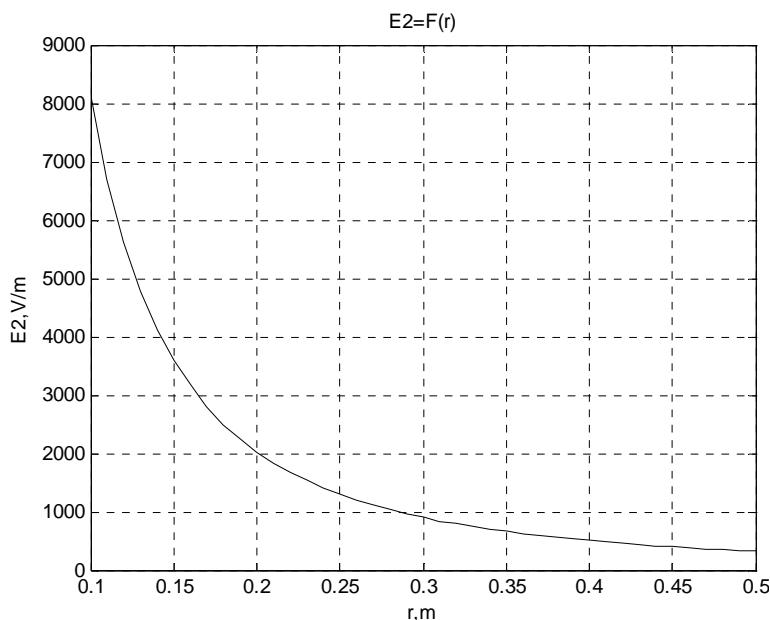

Figure 4 – The electric field outside the space-charged sphere as a function of the distance from the center of the sphere

Comparison of the curves given in the figures 3 and 4 demonstrates that the electric field outside the space-charged sphere decreases with distance quicker than the field potential.

```

**Conclusion.** The MATLAB program for calculation and visualization of the electric field of a space-charged sphere allowed to

1) calculate the electric field and electric potential inside a space-charged sphere as a function of the distance from the center of the sphere. The electric field inside the sphere is proportional to the distance of the field point from the center of the sphere and the potential inside the sphere is inversely proportional to the squared distance from the center of the sphere. (The electric field inside a space-charged sphere increases proportionally to the distance from zero to  $E_1=8092,6$  V/m at its surface (figure 1). The field potential decreases as the reciprocal of the squared distance from  $f_{10}=1213,9$  V at the center up to  $f_{22} = 809.2624$  V at its surface (figure 2));

2) calculate the electric field and potential outside a space-charged sphere as a function of the distance from the center of the sphere. The electric field outside the sphere decreases inversely proportionally to the square of the distance from the center of the sphere (figure 3, and the potential decreases inversely proportionally to the distance from the center of the sphere (figure 4).

3) draw equipotential lines of the electric field outside and inside the sphere in three-dimensional space and in projection on the X-Y plane.

The students can be suggested to work out the similar program for calculation and visualization of the electric fields and electric potentials inside and outside the analogous charged sphere of a certain radius and charge evenly distributed throughout the volume of the sphere.

### **ҚӨЛЕМДІ ЗАРЯДТАЛҒАН ШАР ӨРІСІН ЕСЕПТЕУ ЖӘНЕ БЕЙНЕЛЕУ**

**Аннотация.** Қөлемді зарядталған шар (яғни, шар, қөлем бойнша біркелкі зарядталған) өрісін есептеу мен бейнелеу MatLab бағдарламасының көмегімен орындалды. Қөлемді зарядталған шардың ішіндегі және сыртындағы электр өрісінің кернеулігі мен потенциалы берілген нүктенің шар центрінен өлшенген ара қашықтыққа тәуелдігі анықталған. Шар ішіндегі кернеулік шардың центріне дейн ара қашықтыққа пропорционал өседі, ал потенциал сол ара қашықтың квадратына кері пропорционалды кемиді. Шар сыртындағы электр өрісінің кернеулігі шардың центрінен саналған ара қашықтықтың квадратына кері пропорционал кемиді, ал потенциалы сол ара қашықтыққа кері пропорционал кемиді. Шар центріндегі және бетіндегі потенциал мен кернеулік есептелген. Шар ішінде және сыртындағы эквипотенциалдар сзықтары үш өлшемді кеңістікте және X-Y жазықтығындағы проекциясы бейнеленген.

**Түйін сөздер:** бейнелеу, қөлемді зарядталған шар, потенциал, кернеулік, эквипотенциалды сзықтар.

### **ВЫЧИСЛЕНИЕ И ВИЗУАЛИЗАЦИЯ ЭЛЕКТРИЧЕСКОГО ПОЛЯ ОБЪЕМНО-ЗАРЯЖЕННОГО ШАРА**

**Аннотация.** Вычисления и визуализация электрического поля объемно-заряженного шара (т.е., шар, равномерно заряженный по объему), выполнены с помощью программы MATLAB. Проведено вычисление напряженности и потенциала поля как внутри, так и снаружи объемно-заряженного шара как функций расстояния от центра сферы. Напряженность поля внутри шара пропорциональна расстоянию точки поля, где определяется напряженность, до центра сферы. Потенциал поля внутри шара обратно пропорционален квадрату расстояния точки поля, где определяется потенциал, до центра сферы. Напряженность вне шара уменьшается обратно пропорционально квадрату расстояния от центра шара, а потенциал уменьшается обратно пропорционально расстоянию от центра шара. Также вычислены напряженность и потенциал поля на поверхности и в центре сферы. Эквипотенциальные линии электрического поля внутри и снаружи шара представлены в трехмерном пространстве в проекции на плоскость X-Y.

**Ключевые слова:** визуализация, объемно-заряженный шар, потенциал, электрическое поле, эквипотенциальные линии.

**Publication Ethics and Publication Malpractice  
in the journals of the National Academy of Sciences of the Republic of Kazakhstan**

For information on Ethics in publishing and Ethical guidelines for journal publication see <http://www.elsevier.com/publishingethics> and <http://www.elsevier.com/journal-authors/ethics>.

Submission of an article to the National Academy of Sciences of the Republic of Kazakhstan implies that the described work has not been published previously (except in the form of an abstract or as part of a published lecture or academic thesis or as an electronic preprint, see <http://www.elsevier.com/postingpolicy>), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. In particular, translations into English of papers already published in another language are not accepted.

No other forms of scientific misconduct are allowed, such as plagiarism, falsification, fraudulent data, incorrect interpretation of other works, incorrect citations, etc. The National Academy of Sciences of the Republic of Kazakhstan follows the Code of Conduct of the Committee on Publication Ethics (COPE), and follows the COPE Flowcharts for Resolving Cases of Suspected Misconduct ([http://publicationethics.org/files/u2/New\\_Code.pdf](http://publicationethics.org/files/u2/New_Code.pdf)). To verify originality, your article may be checked by the Cross Check originality detection service <http://www.elsevier.com/editors/plagdetect>.

The authors are obliged to participate in peer review process and be ready to provide corrections, clarifications, retractions and apologies when needed. All authors of a paper should have significantly contributed to the research.

The reviewers should provide objective judgments and should point out relevant published works which are not yet cited. Reviewed articles should be treated confidentially. The reviewers will be chosen in such a way that there is no conflict of interests with respect to the research, the authors and/or the research funders.

The editors have complete responsibility and authority to reject or accept a paper, and they will only accept a paper when reasonably certain. They will preserve anonymity of reviewers and promote publication of corrections, clarifications, retractions and apologies when needed. The acceptance of a paper automatically implies the copyright transfer to the National Academy of Sciences of the Republic of Kazakhstan.

The Editorial Board of the National Academy of Sciences of the Republic of Kazakhstan will monitor and safeguard publishing ethics.
